

Cable Granulation

RIMECO

RIMECO

Rimeco A/S - competent and innovative

Rimeco A/S was founded in 1888 and is today widely active within the recycling sector.

At RIMECO, we provide quality, consistency and reliability. Our reputation has been forged over many years through the supply of sustainable material, good quality for use in mills and foundries around the world.

Quality control is fundamental at RIMECO, and every order that leaves the facility is sampled to ensure you receive the highest quality.

*Klaus Peter Riggelsen
CEO and Owner at Rimeco*

RIMECO

- Scrap today, value tomorrow

At our facilities in Aabenraa, we receive large amounts of new and used cables every week.

Our downstream process is a dry technique, which means that we recycle the valuable metals into top qualities without any use of water and chemicals and oxidation losses.

This flexibility is the basis of our market activities and will reassure our customers that we always get the most from their material.

- Scrap today, value tomorrow

1

We receive a lot of different cables in our plant in Aabenraa. E.g. household cables, data cables, armored cables etc.

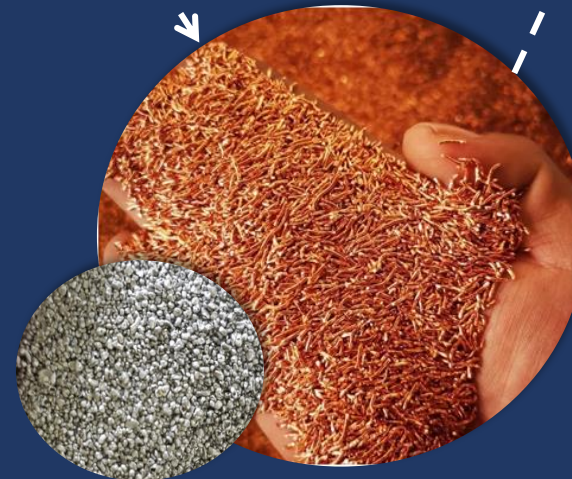

2

We sort the cables before we shred them into small pieces

3

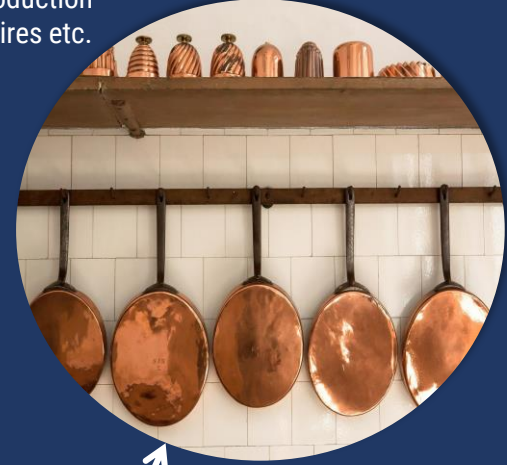

The shredded fragments are now processed through our production line

4

Output from our production is up to 99% purity. The granules are then sold

Our metal, aluminium and copper granules end up in new production as electrical appliances, wires etc.
